Art Unit: 1714

DETAILED ACTION

Priority

- The examiner does not consider petitions. Applicants should resubmit it to the Petition Branch.
- 2. The Final Rejection imposed on 10/10/03 is withdrawn in light of the granting of the petition filed 12/12/03, by the Director of Technology Center 1700.

Claim Objections

3. Claim 66 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. The intended use does not further limit the claimed composition of claim 1.

Double Patenting

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit: 1714

5. Claims 1-7, 9-20 and 22-66 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 40-75 of copending Application No. 09/398,377. Although the conflicting claims are not identical, they are not patentably distinct from each other because they cover the same subject matter, featuring identical ingredients and overlapping concentrations. The intended use, e.g. cosmetic composition has no patentable significance.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 7. Claims 1-5, 9-12, 20, 37-38 and 62-63 are rejected under 35 U.S.C. 102(b) as being anticipated by Mueller et al. 5,281,329.
- 8. Mueller et al. disclose petroleum oils and polyalkyl (meth)acrylates in column 1, lines 9-13, side chain crystalline polymers from column 2, line 15, to column 3, line 30. Cooling occurs when the heating is removed. The polymer is used as a pour point depressant, which is not a thinner. It is analogous to an anti-freeze, that is, it stops the oils from solidifying. Cosmetic composition is the intended use and as such it has no patentable significance. Furthermore, crude oil encompasses the ingredients yielded by fractionating it, for example mineral oil, which is a basic ingredient of many cosmetic

Art Unit: 1714

formulations. The concentration of the side chain crystalline polymers in the oil is 1-10,000 ppm, which overlaps the 0.1-12% range shown in applicants' specification, on page 10, lines 14-18. The disclosures of a reference are not limited to its Illustrative Examples. All properties are inherent in the composition. There is no Declaration by Dr. Bitler in the file. Applicants' claims are not novel. Claims 5 and 6 were mistakenly rejected in previous actions.

Claim Rejections - 35 USC § 103

- 9. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 10. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 11. Claims 1-5, 9-12, 20, 37-38, 59-60 and 62-63 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mueller et al., in view McCoy et al. 3,894,958 or

Art Unit: 1714

Paboucek 5,217,636, further in view of Franck et al. 3,915,843 and even further in view of Norbury et al. 4,976,961.

Mueller et al. has been discussed already. McCoy et al. teach polymethacrylate 12. copolymer thickeners thickening mineral oil, the methacrylate copolymer containing ndodecyl alcohol in an amount of 50-55% and octadecyl alcohol in an amount of 20-22%. See column 6, lines 37-52. Paboucek recites mineral oils thickened with polyalkyl methacrylates, which solves the cold temperature problems. See column 2, lines 55-59. Franck et al. display oil being mixed with polymethacrylate polymer, which both improves the viscosity characteristics versus temperature and thickens the oil. See column 1, lines 30-37. Norbury et al. reveal encapsulated cosmetic materials comprising encapsulated oil thickened with polyacrylics, see claims 1-2, where the oil can be mineral oil, castor oil, jojoba oil or vegetable oil (claim 12). It would have been obvious to one having ordinary skill in the art, at the time the invention was made, to use the side chain crystallized polymers of Mueller et al. to thicken mineral oil, which is a petroleum oil, since their effectiveness in mineral oil is shown by McCoy et al. and Paboucek, which mineral oil thickened with polyacrylics is the basis of the cosmetic formulation of Norbury et al. Both of the Franck et al. and Paboucek references prove that pour point depression and thickening are not mutually exclusive and the phenomenon of thickening while keeping the oil liquid is well known. It is not necessary for a prior art reference to disclose the same property or utility as the claimed product to establish a prime facie case of obviousness under 35 U.S.C. paragraph 103.

Art Unit: 1714

Response to Declaration

- 13. The Declaration by Dr. Bitler has been considered. However, said Declaration does not overcome the rejection for the following reasons:
 - A) It represents opinions only.
 - B) Morawsky et al. is not part of the rejection anymore.
- C) Mineral oil and petrolatum are cosmetic materials and they are covered by the primary reference.
- D) The secondary references establish the obviousness of using SCC polymers to thicken mineral oil.
- E) Paboucek and Franck et al. prove that pour point depression and thickening are not mutually exclusive.

Therefore the rejection is maintained.

- 14. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Peter Szekely whose telephone number is (571) 272-
- 1124. The examiner can normally be reached on 7:00 a.m.-5:30 p.m. Tuesday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vasu Jagannathan can be reached on (571) 272-1119. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
